# SIT CIT Test Scenarios

**DECISION:** Approval of SIT CIT Test Scenarios v5.2.2

Programme (Kevin Davis)

*10 mins*

## SIT CIT Test Scenarios

Following the SITWG 09 August 2023, we took an action to consider whether or not we should progress the CIT Test Scenario's into TMAG (planned 16 August 2023) for Approval.

On reflection, we recognise the importance of these Artefacts and the importance of providing participants with sufficient review time to be able to provide an informed view at SITWGs and TMAGs, so we did the following:

1. Offered bilaterals to participants to assure resolution of open queries; we have since held a number of very productive sessions to validate changes we had made, as well as agreed an approach for timely resolution of any residual issues.
2. Published an enhanced CIT Scenario Pack v5.2.2 16/08, encompassing agreed resolutions (as discussed in bilaterals); these also address queries raised during the SITWG, and via e-mail.
3. Provided SITWG members with a further 5 working days to conduct final reviews against previous review comments.
4. Scheduled this extraordinary TMAG to approve the v5.2.2 CIT Scenarios.

As with the most recent packs, we have included fields that identify the changes we have made.

For queries raised against the v5.2.2 Scenarios during the 5 day assurance window, the programme has agreed the following:

1. Where the cause, and the resolution, lies in the scenario itself, the SI team will issue an addendum to the scenarios and issue to all participants. The test cases that follow will align with the revised scenario.
2. Where the cause lies in a design stipulation, but a participant or role contends that stipulation does not apply to them, we will tag the scenario as such. This will be progressed via a DIN for implementation in a future design iteration. In this case, the test will be excluded from CIT for the impacted party/parties.

Where parties raised such concerns via e-mail, or in the 23 August extraordinary SITWG, we have worked bilaterally with them to seek closure.

**Decision:** We would like to request TMAG Approval for the v5.2.2 CIT Scenarios.

**Note** – The CIT Scenarios are aligned to the Interim Design Release 2 Artefacts (Interface Catalogue v5.2.1), and not deviate beyond this. Should a Participant retain concerns against the Interim Design Release 2, then appropriate DINs need to be created and registered to enable resolution.

# SIT Functional Connectivity Proving

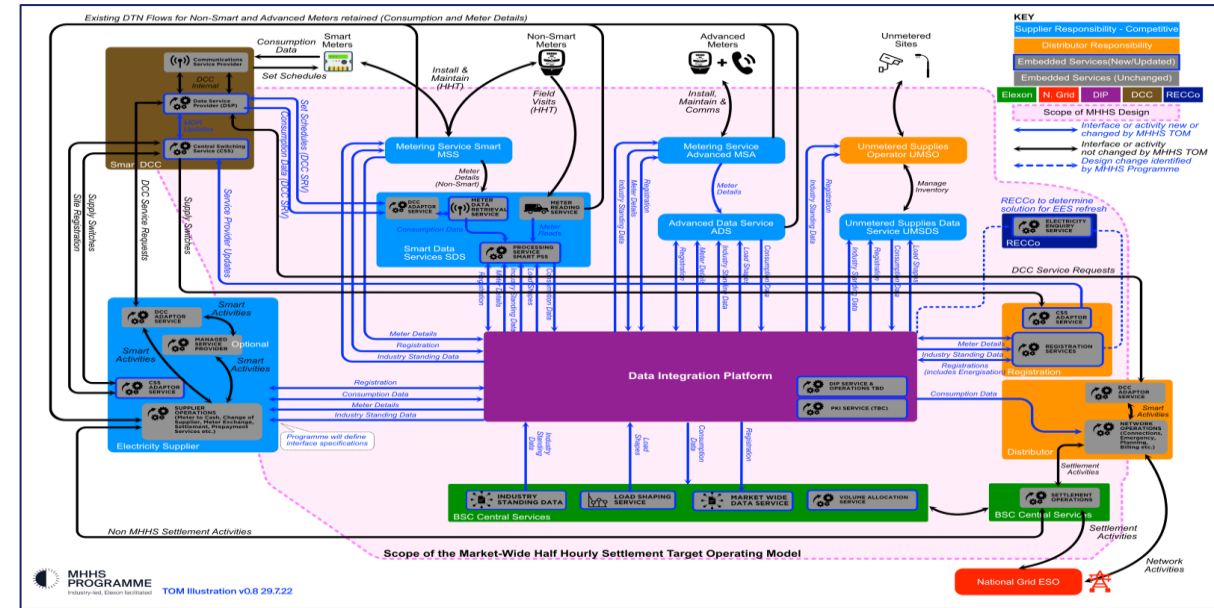

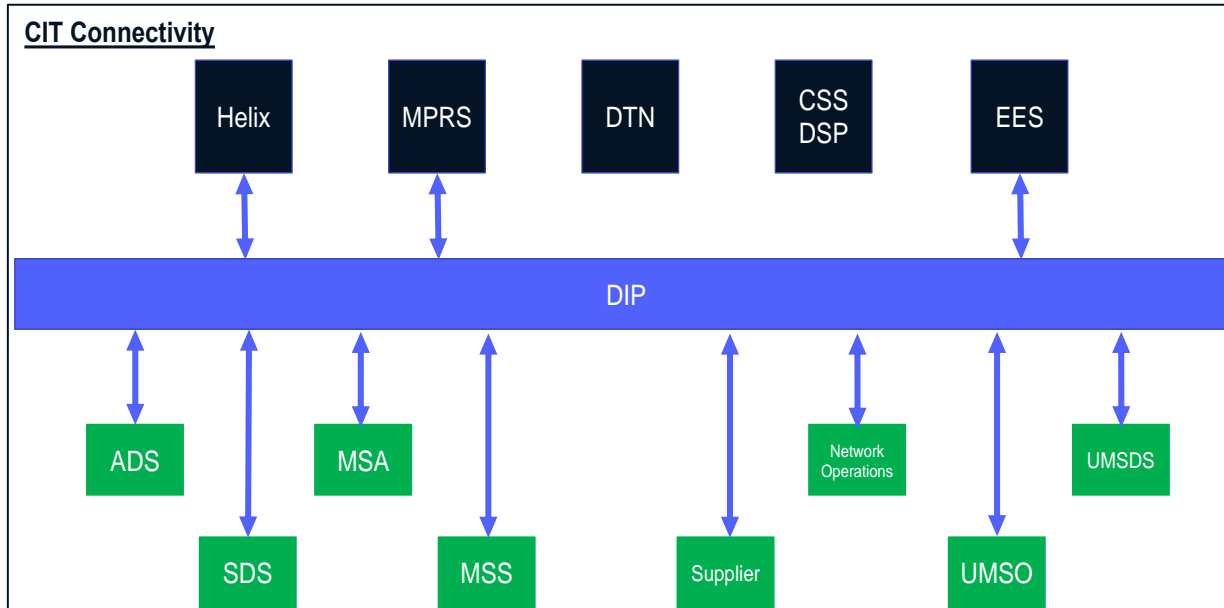

**DECISION:** Approval of SIT Functional Connectivity Proving

Programme (Simon Berry)

*10 mins*

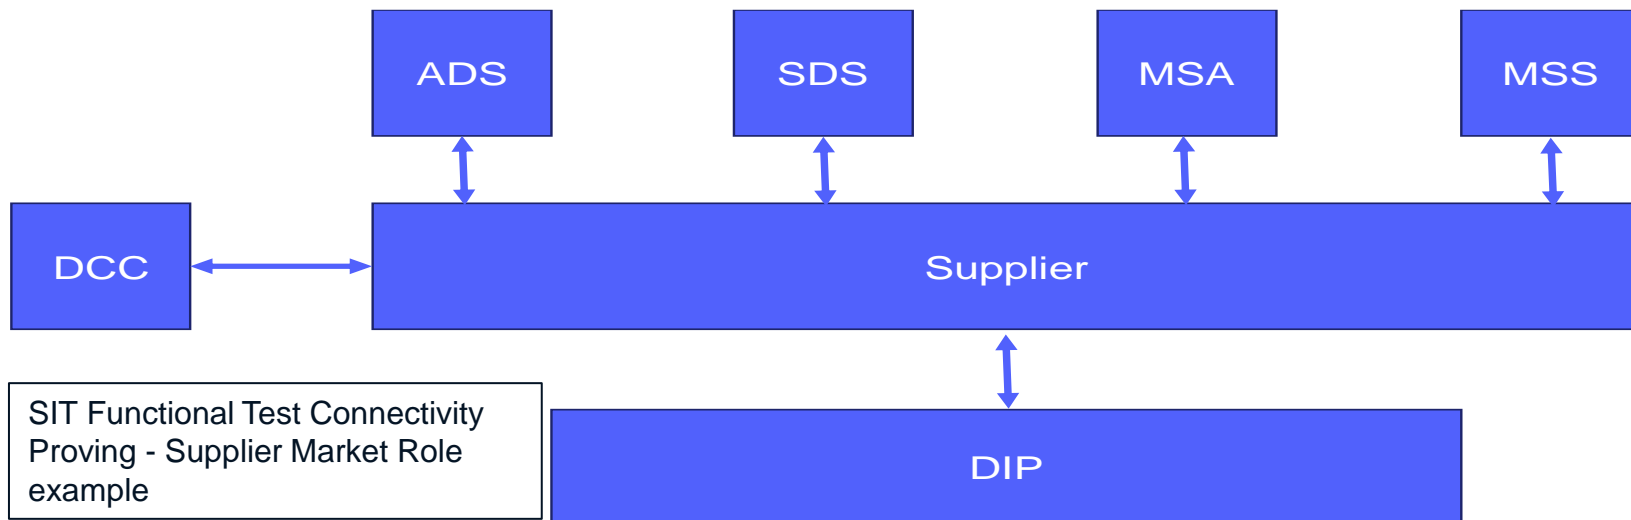

# SIT Functional Connectivity Proving

- The connectivity proving phase for CIT is relatively simple. Test Participants will need to ensure that their internal test environment connectivity is confirmed and that they connect to the DIP.
- The objective of SIT Functional testing is to validate the end to end operability of the MHHS solution.
- In order to execute end to end testing the various market roles need to be connected.
- In order to ensure that SIT Functional test phase can commence test execution as scheduled we will be introducing a SIT Functional Connectivity Proving Phase.

## SIT Functional Connectivity Proving

- SIT Functional Connectivity Proving will follow the same principles as CIT Connectivity Proving – commence 8 weeks prior to test execution and duration of 4 weeks
- SIT Functional Connectivity Proving will take place over a 4 week period, from 8<sup>th</sup> January '24 to 2<sup>nd</sup> February '24.
- We recognise that this period is whilst some of the Market Roles are in CIT test execution but we anticipate that the resource required to execute CIT testing and undertake Connectivity Proving are different, albeit in the same SIT Functional test environment
- The scope of SIT Functional Connectivity Proving has yet to be determined. As soon as we have defined we will share with you.
